MODEL STW-8

THE THINKING MACHINE OF AMERICAN BUSINESS

Exclusive Touch-One-Key Automatic Multiplication
with Proof Dials

Exclusive Fully Automatic Division with Automatic
Decimal Point

Automatic Tabulation

Automatic Grand Totals

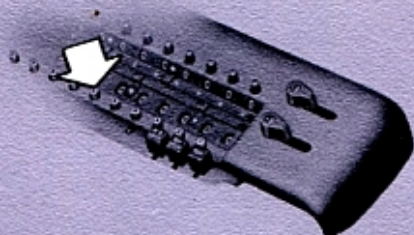

Exclusive Keyboard Lock and Individual Column Locks
Split Dial Clearance and Dial Locks for Accumulation

Exclusive Twirlers for Direct Dial Entry

Automatic Dial Clearance and Carriage Positioning

Overall Simplicity for Unequalled Operating Speed

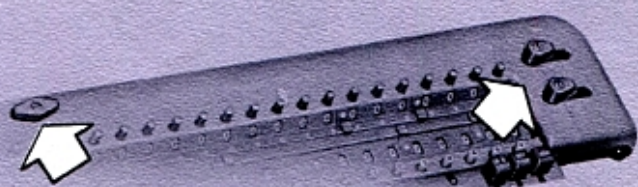

ELECTRICALLY OPERATED

automatic tabulation

with automatic decimal point

With selective tabulator keys, you just pick the number of decimal places wanted in the quotient. The Friden then automatically tabulates and correctly points off the answer.

split dial clearance • dial accumulator locks

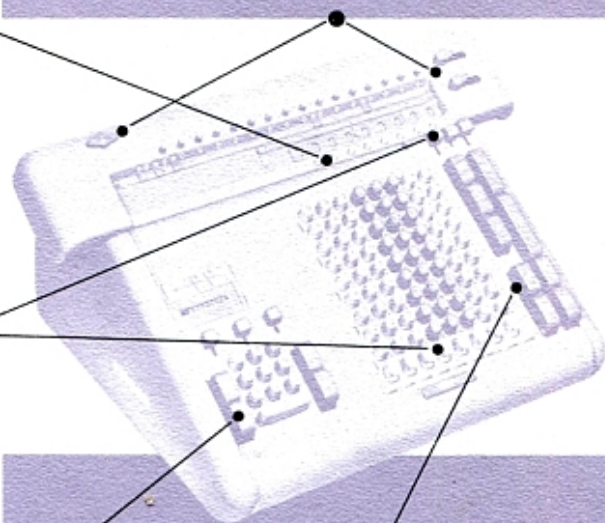

As products appear in one side of the upper dials, they may be simultaneously accumulated to a grand total in the other side. Saves the extra operation of re-adding! Multipliers, quotients, or grand totals may be accumulated in the lower dials for automatic proof.

exclusive keyboard lock,

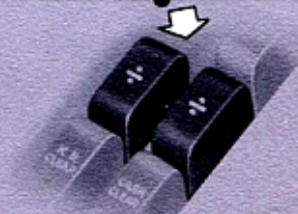

individual column locks

A flick of a key locks an amount on the keyboard, prevents accidental depression or release of any key. Separate columns may be locked with individual column locks, leaving the other columns open. These features eliminate manual re-setting and chances for error whenever repeating factors are used.

exclusive fully automatic multiplication

Touch one key after setting both factors. The Friden automatically completes the multiplication and places the decimal. Same automatic procedure for accumulative or negative multiplication.

exclusive fully automatic division

Touch divide keys after entering dividend and divisor. Everything else is completely automatic, including decimal placement.
